RKP-4B**

**Four Button Wireless Keypanel Beltpack
Wireless Keypanel Base Station**

The RKP-4 and RKP-4B have not yet been Approved by the FCC and cannot be offered for sale until Authorization from the FCC has been granted

There is nothing like the RKP-4 wireless intercom system anywhere in the world. The RKP-4 Four Button Wireless Keypanel intercom system is a One to One (one base station to one beltpack) full duplex, digitally encrypted wireless intercom and will provide communication directly to RTS Matrix communication systems. The RKP-4 offers a list of standard features that are unparalleled in the industry, like frequency agility, digital audio encryption, advanced ClearScan™, battery telemetry to the base station, base station RF meter and much more. The RKP-4, like it's sister product the BTR-1, is packed full of the latest technology like Intelligent Power Control™, DSP Digital Audio Processing and proprietary digital audio encryption. The RKP-4 beltpack interfaces directly through an RKP-4B base station with Adam, Adam CS and Zeus Digital Matrix intercom systems. The RKP-4 wireless beltpack will operate similar to an MKP-4 Keypanel including scroll control function and a call waiting display and is configured with AZ-EDIT software. This wireless intercom system not only sounds great but, provides secure communications at the same time.

Available August 2005.
